

- Do not wash your vehicle with any chemicals for 7 days after paint protection (IGL Wash or plain water is fine).
- Only use PH Neutral washing products (ideally use IGL products as they were designed to work best with your paint protection), DO NOT use any heavy-duty degreasers or solvent based cleaners as they will not only damage the coating but may also damage your paint.
- Wash your vehicle every 2 weeks as a minimum or whenever dirty, do not leave dirt for prolonged periods of time without washing as this may lead to contamination build up over the coating reducing hydrophobic properties.
- Always dry your car after washing or rinsing, tap water contains minerals that will deposit on the paint reducing hydrophobic properties and damaging your coating.
- Do not clay, polish or wax your car. This is not required or recommended. Feel free however to use IGL Enhancer or Premier if you wish to enhance your paintwork.
- Always wash bird/bat poo and tree sap off your paint as soon as possible. Whilst the coating will protect your paint, the coating may stain and will require repair.

PAINT CARE GUIDE

If you have any questions relating to the maintenance of your coating or vehicle please do not hesitate to contact us, visit us or ask our IGL, our job is to assist you in keeping your car looking its best.

IGL COATINGS AUSTRALIA PTY LTD

Dear customer,

Thank you for choosing IGL Coatings and our certified Master Applicators as the provider of detailing services and in particular carrying out paint correction and ceramic paint protection on your vehicle.

As our IGL Master Applicator may have explained, paint correction is permanent meaning that your vehicle can remain in pristine condition for many years to come given the proper maintenance is followed. Our premium IGL ceramic coatings are also proven to last for many years with correct maintenance and care.

In order to ensure that your vehicle remains in the same beautiful condition as when it was first detailed and protected, we strongly recommend that you take note of some of the basic do's and don'ts listed below.

IGL Premium car care products are available for you to purchase both through our IGL Master Applicator who detailed your vehicle or online at www.iglcoatings.com.au , these are the exact same professional products that have used on your vehicle to bring it to such an amazing standard.

WASHING METHOD

(for both coated and uncoated vehicles)

- We use and recommend washing with the 2 bucket method including using snow foam.
- We recommend using soft microfibre wash mitts and soft drying towels. Avoid using chamois and sponges as they will lead to swirl marks.
- Always dry your car after washing or rinsing to avoid water spots.

- Always wash your car when dirty especially after light rain following prolonged dry periods, rain water especially dirty water from the road may and will contain chemicals that will spot your coating.
- Always wash off bird/bat poo immediately, failing to do so will lead to permanent paint damage. If your vehicle is protected with IGL Coatings, the ceramic coating will protect your paint from being damaged but will itself may be stained and require repair.
- When possible avoid parking your vehicle under trees that release sap. If you find tree sap on your paint we recommend washing off as soon as possible with IGL wash and warm water.
- We recommend using IGL Enhancer following every wash or IGL premier every 8 weeks to further protect your coating and improve its hydrophobic ability and prolong its life. These products act as a barrier in absorbing damage thus protecting the coating.
- Avoid taking your vehicle to hand car washes or self wash using any brush (automated or manual) as this will lead to scratches and swirl marks. Some automated / hand washes may use products like acids, alkaline that may damage not only your IGL Coating but your vehicle as well.
- We recommend avoiding the free wash during your vehicle service for the reasons above.
- Do not rub your hands, fingers or any item on the paint especially when the car is dirty, this will lead to scratching.

APPLICABLE TO CERAMIC PAINT PROTECTED VEHICLES

- Your vehicle should ideally remain dry and clean for the first 24 hours after being ceramic coated (if it was collected on same day after coating). It should not be wet within the first 4 hours following paint protection.
